## **DETAILED ACTION**

### ***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-11, drawn to a front suspended axle, classified in class 280, subclass 124.136.
- II. Claims 12-22, drawn to a front suspension, classified in class 280, subclass 86.75.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination does not require a telescopic top arm for the front suspension. The subcombination has separate utility such as in a front suspension for a vehicle that does not include two front axle shafts.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Art Unit: 3611

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

The Examiner apologizes that this restriction had to be resent but the previous restriction was incorrect due to an incorrect classification grouping and the application was under a time deadline on the Examiners docket.
